<b>Priority</b>	1
<b>Status</b>	D
<b>Description</b>	The user can login and logout from the application using Google Sign-In, while having the session persist across multiple logins.
<b>User Goal</b>	The user wants to access or leave the application.
<b>Associated User Stories</b>	US.1, US. 3, US.4
<b>Dependent Use Cases</b>	None
<b>Workflow</b>	<ol style="list-style-type: none"> <li>1. The system shall display Login.js</li> <li>2. The system shall determine if the user is already logged in: <ol style="list-style-type: none"> <li>a. If true, go to step 5</li> <li>b. If false, go to step 3</li> </ol> </li> <li>3. The user shall fill in the Google Sign-In prompt and submit</li> <li>4. The system shall confirm success of Google Sign-In</li> <li>5. The system shall determine if the user already exists by accessing the database</li> <li>6. The system shall load: <ol style="list-style-type: none"> <li>a. ChatRoom.js in case the user already exists</li> <li>b. CreateUser.js in case the user does not exist</li> </ol> </li> <li>7. The system shall store the user session</li> <li>8. The user shall press the Log Out button</li> <li>9. The system shall terminate the user session</li> <li>10. The system shall redirect to Login.js</li> </ol>
<b>Alternative Workflow(s)</b>	<p>Google Sign-In fails:</p> <ol style="list-style-type: none"> <li>5. The system shall reload Login.js</li> </ol> <p>The database access to check if user exists fails:</p> <ol style="list-style-type: none"> <li>5. The system shall reload Login.js</li> </ol> <p>The Log Out action fails:</p> <ol style="list-style-type: none"> <li>9. The system shall stay on ChatRoom.js</li> </ol>

## UC.2 User Creation

<b>Priority</b>	1
<b>Status</b>	D
<b>Description</b>	The first-time user can create a profile with a unique username.
<b>User Goal</b>	The user wants to create a profile to be able to use the application.
<b>Associated User Stories</b>	US.2
<b>Dependent Use Cases</b>	UC.1
<b>Workflow</b>	<ol style="list-style-type: none"><li>1. The system shall display CreateUser.js</li><li>2. The user shall fill in the username prompt and submit</li><li>3. The system shall determine if the username already exists by accessing the database<ol style="list-style-type: none"><li>a. If the username already exists, the system shall notify the user and go back to step 2</li></ol></li><li>4. The system shall store the username in the database</li><li>5. The system shall display ChatRoom.js</li></ol>
<b>Alternative Workflow(s)</b>	<p>The database access to check if username exists fails: 4. The system shall reload CreateUser.js</p> <p>The database access to store the new username fails: 5. The system shall reload CreateUser.js</p>

## UC.3 Messaging

<b>Priority</b>	1
<b>Status</b>	D
<b>Description</b>	The user can message another user on the application.
<b>User Goal</b>	The user wants to successfully send a text message to another user.
<b>Associated User Stories</b>	US.5, US.8, US.10
<b>Dependent Use Cases</b>	UC.1, UC.2
<b>Workflow</b>	<p>Message rendering and listener:</p> <ol style="list-style-type: none"><li>1. The system shall display ChatRoom.js</li><li>2. The system shall get all messages from the database</li><li>3. The system shall render the messages in ChatRoom.js</li><li>4. The system shall start the listener for new messages</li><li>5. The system shall determine if new messages are sent</li><li>6. The system shall re-render the messages in ChatRoom.js once a new message comes in</li></ol> <p>Send a message:</p> <ol style="list-style-type: none"><li>7. The system shall display ChatRoom.js</li><li>8. The user shall select a user from People.js</li><li>9. The system shall render that specific chat</li><li>10. The user shall enter the new message in the message bar</li><li>11. The system shall render the new message in the message bar</li><li>12. The user shall hit the send button</li><li>13. The system shall post the new message to the database</li><li>14. The system shall clear the message bar</li><li>15. The system shall go to step 2</li></ol>
<b>Alternative Workflow(s)</b>	<p>The database access to store the new message fails:</p> <ol style="list-style-type: none"><li>14. The system shall leave the message in the message bar</li></ol>

## UC.4 Username Search

<b>Priority</b>	1
<b>Status</b>	D
<b>Description</b>	The user can search another user by their username.
<b>User Goal</b>	The user wants to find another user to start or continue a conversation.
<b>Associated User Stories</b>	US.6
<b>Dependent Use Cases</b>	UC.1, UC.2
<b>Workflow</b>	<ol style="list-style-type: none"><li>1. The system shall display ChatRoom.js (with People.js rendered as a child component)</li><li>2. The user shall enter a username in the search bar</li><li>3. The system shall query the database for a list of all users with matching prefix</li><li>4. The system shall update People.js by displaying only a list of the users with matching prefix</li></ol>
<b>Alternative Workflow(s)</b>	The database query for usernames fails: <ol style="list-style-type: none"><li>4. The system shall not update anything</li></ol>
